Genpact’s client, a leading imaging company, creates cameras, lenses, and other imaging tools and sells them to major companies like Woolworth’s in Australia. Their purchase order fulfillment process to these companies was an inefficient manual process, where human agents had to manually query the system for new orders from clients by constantly having to log into the system. Once they actualized a request, they would have to physically validate the purchase order and apply the specific pricing and discounts to the order based on each client’s contractual agreements. Then, they had the authority to apply an additional 1% discount, if they followed the manual hierarchy protocols. Once this was manually applied and set, the purchase order would be fulfilled, shipped and invoiced. This manual process was time-consuming and prone to human errors. While some human touch was required, leaders on the customer side and Genpact’s side quickly recognized that automation was needed.

SOLUTION

Automation Anywhere and Genpact were tasked to reengineer the process using proprietary Smart Enterprise Processes (SEPSM). The goal was to improve inefficiencies, inaccuracies, and duplication due to human error in the highly manual process of the customer’s order fulfillment system. The solution needed to integrate with the legacy system and maintain some “humans-in-the-loop” to eyeball the entire process for quality control, allowing for an optimal human-robot partnership.

BENEFITS

- **40%** Improvement in productivity
- **25%** Increase in transaction speed and reduction in cost
- **Zero** Errors
- **90%** Reduction in manual labor

DETAILS

**ROBOTIC PROCESS AUTOMATION**

Automation Anywhere and Genpact’s solution architect designed an automation solution using various RPA technologies available with the Automation Anywhere platform. It reduced the number of employees required for Purchase Order fulfillment from 100 to 10, and reduced overall errors while increasing transaction speed. One of the key questions Genpact and Automation Anywhere faced was whether to create a zero touch process or create a process that utilizes a human-automation partnership. The advantages of a zero-touch process were obvious, but a redesigned process with a human and automation partnership would create a solution that would reduce exceptions significantly as well as increase customer satisfaction. The latter was chosen.
THE RPA FLOW
1. The system automatically pulls data from the customer system, checking for new purchase orders. This eliminated the current practice where employees had to constantly log in and look for new orders, which further reduced fulfillment times and increased productivity.
2. Once a purchase order is downloaded it is immediately pushed into the legacy system.
3. The agent acts as a “human-in-the-loop” and manually validates the order for accuracy based on the customer contract.
4. Automation Anywhere uploads the purchase order into Oracle.
5. Discounts are automatically applied based on the customer agreements.
6. Agents spot-check the fulfilled order, ensuring quality control and human touch.

THE RESULTS
By adding automation to the legacy system, the fulfillment process was significantly improved, and bottlenecks in productivity, especially during the busy season, were eliminated entirely. While Automation Anywhere had the capability to create a rapid automation process that was zero touch, a unique approach was chosen to combine people and automation to create better customer satisfaction. Genpact’s process and business transformation expertise coupled with Automation Anywhere’s automation solutions created this unique, winning combination for the imaging client.

The non-invasive solution provided countless advantages such as:

- Legacy system integrated automation meant that no additional resources were required for custom programming. No code changes were needed. The entire system could run on the current management system and thus no additional resources were required for modifications.
- Faster transaction speed eliminating bottlenecks during the busy season or times when there was a reduction in manpower available.
- Significantly reduced costs due to elimination of processing duplicate orders.
- Faster turnaround of the order fulfillment process, leading to faster transaction speed and increased productivity across both the imaging and trucking departments.
- Fewer human errors, especially in the verification process.

Genpact and Automation Anywhere continue to work together to create automation solutions across a wide range of processes in various industries, with a view to increase productivity and increase efficiencies in business.

AT-A-GLANCE
Genpact (NYSE: G) which stands for “generating business impact” is a global leader in designing, transforming and running intelligent business operations including those that are complex and specific to a set of chosen industries. They have been at the forefront of building and deploying automation solutions in partnership with Automation Anywhere to drive transformation and business outcomes with Robotic Process Automation (RPA). These solutions provided synergistic answers to Genpact and Genpact’s customers by improving workflow, increasing efficiency, productivity, transaction speeds, accuracies and profit, all while reducing capital expenditures. Solutions designed by Automation Anywhere and Genpact integrated automation across several applications including legacy systems. Following are two use cases where Genpact utilized Automation Anywhere to transform the way they do business for their clients.

Contact Automation Anywhere to learn more about how shared services and business services providers can apply robotic process automation as a business enabler to offer differentiated services and solutions to their clients. Call 1-888-484-3535 or visit www.AutomationAnywhere.com to schedule a live demo.

About Automation Anywhere
Automation Anywhere is the global leader in delivering the most advanced, enterprise-grade, cognitive Robotic Process Automation (RPA) platform capable of automating any business process. The platform enables enterprises throughout the world to create digital workforces that manage and scale business processes faster, with near-zero error rates, while dramatically reducing operational costs. We believe that people who have more time to create, think, and discover build great companies. It’s why we’ve dedicated more than a decade to providing the world’s best RPA technology to leading financial services, BPO, healthcare, technology, and insurance companies—to name a few—across more than 90 countries. For additional information, visit www.automationanywhere.com.
