Al-powered automation empowers teams and saves millions for medical device manufacturer

25,000 hours saved

faster order fulfillment

annual savings

This company builds cloud-connected medical devices that transform care for people with breathing issues and other chronic diseases.

We realized that a central delivery model may not work the best. We began focusing on a federated delivery model.

> **Director Business Process** Transformation

Challenge

Acquisitions helped this company expand, but created siloed and inconsistent finance, supply chain, and other processes. With a complex IT environment and a fragmented structure, automation didn't seem like an option.

Solution

As this company pushed for more unified operations, it tapped Automation Anywhere to breathe life into its automation aspirations. A successful automation pilot, driven by a center of excellence, was guickly followed by a wave of automations across finance, operations, regulatory, human resources, and other areas. The company further accelerated its automation efforts by empowering local teams to tailor their automation workflows while maintaining a standardized overall approach.

Outcome

The company's blend of centralized standardization and local flexibility, built on Amazon Web Services, enabled rapid expansion of its automation program, achieving 145% growth in one year. That growth was fueled by huge automation impacts across the business including 25,000 hours saved, \$1.34 million in annual cost savings, three-times faster order fulfillment, and more generated by 200 automations.
